## Watermelon Mill

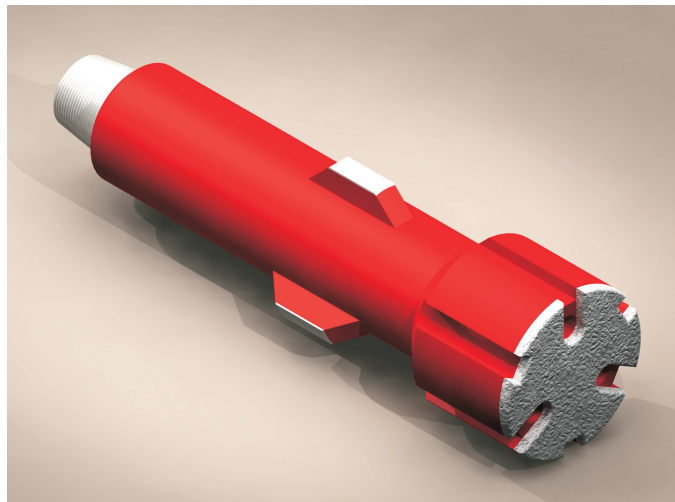

## String Mill

## Junk Mill

“The Universal Milling Tool”

Drillers use the **Spidle Turbeco** junk mill to mill up or dress off almost any steel junk in the hole. Design for milling rock bits, drill pipe, bridge plugs, tubing, squeeze tools, and miscellaneous junk.

**Spidle Turbeco** junk mills are engineered for proper fluid passage to prevent clogging and with stabilizer pads to prevent damage to the interior casing wall. Junk mills are dressed with steel cutting grade Omaloy S concentrate rod for efficient metal removal.

Specify the standard junk mill; the cone buster junk mill which is specifically designed for hard metal cutting; or the super junk mill for extremely tough milling operations.
