## **PRODUCT DESCRIPTION**

Scalecon is a concentrated chemical agent used to convert calcium sulfate (gypsum) scale to an acid soluble material making it easier to remove.

## **RECOMMENDED APPLICATION**

Dilute Scalecon 1:4 with fresh water before use. A typical treatment involves spotting the Scalecon solution across the zones where scale deposits are thought to exist and allow the zones to soak overnight. An acid wash then dissolves the converted scale.

## **COMPATIBILITY**

Compatibility testing is recommended when using this product. Strong acids, strong alkali, and strong oxidizers should be avoided.

## **TYPICAL PHYSICAL PROPERTIES**

Form:	Liquid
Chemical Family:	Organic
Color:	Amber
Solubility:	Water, acid
Odor:	None
Wt. per Gal.:	11.2 lbs.
Freeze Point:	-12 °F
Flash Point:	>200°F (93.3°C)

## **HANDLING/STORAGE**

Avoid contact with eyes, skin, and clothing. Keep drums closed. Refer to Material Safety Data Sheet for more detailed information.

---

## **PACKAGING**

Scalecon is available in 55-gal poly drums or 330 gallon tote tanks.
